

## Equitrac Office is a single, cost-effective output management solution that makes it easy for Providers to:

- Add powerful document output security to your HIPAA compliance framework
- Strengthen the safeguard practices that ensure the privacy and integrity of patient protected health information (PHI)
- Provide healthcare personnel with secure and convenient access to output capabilities wherever needed
- Optimize and manage the use of output devices
- Reduce print waste
- Allocate print costs to specific departments, research grants or even recover allowable print charges

Providing quality healthcare in an environment of legislative reform, tightening budgets, increasing costs, all the while ensuring confidentiality of patient protected health information is a challenge for the modern healthcare Provider. As part of the ARRA, new legislation such as the HITECH Act and changes to HIPAA put increasing demands on Providers.

### Document Security with Convenience

Hospital staff—including physicians, nurses, and administrators—are more likely to comply with security measures as long as these measures don't interfere with their work. The more convenient, transparent or automatic, the better. Just as Equitrac's enhanced security begins at the desktop, so does its convenience. Equitrac makes print tracking and user accountability an automatic and routine part of printing.

### Controlling Costs with Smarter Printing and Better Information

Maximizing the return on a fleet of printers requires that hospital personnel make smarter print choices. Equitrac Office helps achieve cost-saving changes in user behavior by controlling print workflows and making smarter printing virtually automatic.

By controlling access to output devices, tracking every document printed by every user, and reducing the risk of exposing patient PHI, Equitrac Office plays an important role in a healthcare provider's HIPAA compliance framework.

Equitrac Office may help providers meet their fast-approaching deadline to become "meaningful users" of electronic health record (EHR) technology. To that end, the investment in an Equitrac solution should qualify for reimbursement under the provisions of HITECH.
