

Executive Information System

THE NEXT GENERATION IN BUSINESS INTELLIGENCE

Prime Care Technologies delivers an on-demand, enterprise-wide, and in-depth Executive Information System (EIS) right at your fingertips. Our EIS displays vital, accurate, and actionable information in “real time” everyday. Because it seamlessly integrates data from your clinical, financial, and labor data sources, your EIS digital dashboard automatically presents interactive and useful graphs, tables, and reports.

At the click of a button, you will readily view critical key performance indicators that drive your business. You can conveniently analyze and act on census levels; labor hours/costs; receivables and collections; corporate, region, and facility survey outcome risk reports and alerts; peer group comparisons; an MDS submission analyzer; resident risk reports and analytics; financial/RUG focus reports; QM/QI reports; reimbursement rate analytics; a comprehensive federal and state regulatory resource library; and much more.

It's easy to access, accurate, and actionable.

Some outstanding features of PCT's customizable EIS include:

Key Performance Indicators

Along with powerful reports already available with our EIS, you tell us what you want; we'll set it up.

- **View actual census information** by payer type with budget information, including a prior year census comparison.
- **Scrutinize staffing hours and costs** by job type with Week-to-Date, MTD, QTD, or YTD data and charts. From the corporate, region/division, and facility levels, you can also drill down to each employee's hours. Our latest labor reporting feature lets you compare actual labor hours to resident acuity needs.
- **Analyze MTD, QTD, and YTD receivables and collections** by payer from the corporate to the facility levels, including monthly AR Days Sales Outstanding, and AR Review.
- **Identify most “at risk” facilities** with poor survey performance.
- **Discover how a facility ranks** among its peers.
- **Pinpoint facilities** that are at critical primary care staffing levels.
- **Detect residents** who are clinically at risk.
- **Observe the financial impact of MDS submissions** by facility, region, and corporation. Scrutinize corporate, region, facility QM/QI's.

Data Presentation

You have the power to drill down from a corporate, division, region, or a facility perspective in a variety of alpha-numeric and graphic formats with date ranges determined by you. You can get to the source of the problem, view the information, and take action.

Timing of data retrieval

How is this done? The EIS is refreshed from your data source systems as frequently as you want, even several times during the day. The system loads data to your data warehouse and automatically updates the reports and screen views.

Updated data retrieval

The EIS gives you the flexibility to look back over a specified number of days to recapture data elements that may have been corrected since the last retrieval.

Data Thresholds/Alerts

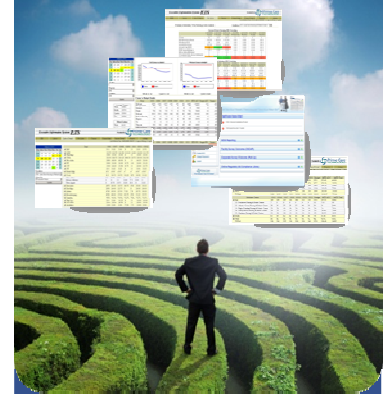

Along with built-in thresholds, you can set key performance indicator requirements and tolerance limits. Deviations from these benchmarks can set off high-level “alerts” from which you can drill down for more detail—from corporate to facility to the individual employee or resident.

Data Export

You can even download specific data views into Excel files for further analysis and distribution.

What's the cost?

Just pennies per resident per day. For more information, please call **877-644-2306** or send an email to keith.farley@primecaretech.com. We'll demonstrate how you can discover real opportunities in real time!

PCT's Cloud-based Computing Services and Solutions

- Cloud Computing Services
- Executive Information Systems - Reporting
- Managed Clinical and Financial Software Hosting
- Help Desk
- Hosted Time & Attendance, HR, and Payroll Solutions
- Business Continuity, High Availability, and Disaster Recovery
- Networks- VoIP, Wired, and Wireless
- Hardware and Telecommunications Procurement
- Asset and Desktop Management
- Microsoft SharePoint
- Encryption: USB, Hard Drive, and Secure Email
- Server, Desktop, and Application Virtualization
- Web Application Performance Accelerator and End-to-End WAN Optimization
