

Mobile Risk Management

New Wave of Security and Compliance Challenges in Enterprise IT

With the rapid proliferation of iOS and Android® devices, mobile apps and bring-your-own-device (BYOD) policies, IT departments are under greater pressure to empower employees while ensuring they can protect their corporate data and maintain compliance. The game has quickly changed from command-and-control and risk avoidance to one of employee enablement and risk management.

With Fixmo MRM, organizations can mitigate and manage the risks by securing and monitoring mobile devices and corporate data. It continuously monitors device integrity and policy compliance, encrypts and protects corporate data, and produces auditable compliance reports. It enables IT departments to maintain and prove regulatory compliance, even while providing access to corporate email, browsing, documents and apps on BYOD devices.

From Managing Devices to Managing Risk

Fixmo MRM provides a holistic approach to mobile security and managing the risks with mobile devices.

Fixmo Sentinel™ offers industry-leading Device Integrity, Policy Management and Compliance Assurance that goes beyond traditional device management to ensure your mobile devices start, and remain, in a known trusted state.

Fixmo SafeZone™ provides a secure workspace for iOS and Android devices that keeps all corporate email, browsing, documents and applications encrypted, contained and under IT control - even on BYOD devices.

Fixmo MRM™

Fixmo MRM™

Secure your mobile devices, protect your corporate data, embrace BYOD, maintain compliance.

Protect Your Mobile Devices

In addition to securing and managing mobile devices, **Fixmo Sentinel** proactively monitors them to detect and prevent potential integrity and compliance breaches:

- Comprehensive MDM capabilities
- Application management and distribution
- Advanced IT policy management
- Exclusive integrity monitoring and tamper detection
- OS Rooting and Jailbreak detection
- Centralized reporting and administration across your entire mobility deployment

Protect Your Corporate Data and Apps

Fixmo SafeZone provides a comprehensive solution for protecting corporate data and mitigating the risks of corporate data loss:

- Secure workspace for iOS and Android
- AES 256-bit encryption of data at-rest and in-transit
- Secure Email, Browsing, Apps and Documents
- IT policies govern access control and usage
- Remote lock/wipe of all corporate data
- Advanced IT policies lock down corporate data as soon as a compromise is detected

Maintain and Prove Compliance

With **Fixmo Sentinel** and **Fixmo SafeZone**, organizations can proactively monitor system integrity and policy compliance, and produce auditable reports:

- Detect and prevent policy changes and tampering
- Keep all corporate data encrypted and contained even when the device is unlocked
- Remote lock/wipe of device or corporate container
- Compliance reports based on actual current state

Embrace BYOD with Confidence

With **Fixmo Sentinel** and **Fixmo SafeZone**, organizations can embrace BYOD without compromising on security or compliance:

- Keep corporate data and apps securely contained
- Separate device-level and container-level policies
- Monitor device integrity and react to compromises
- Ensure the right IT policies are actively enforced
- Generate auditable compliance reports
