

MOBILE SOLUTIONS FOR HEALTHCARE

As more patients and physicians interact with your healthcare organization through smartphones, tablets and other mobile channels, are you prepared to service them effectively? AnyPresence provides mobile apps and a web-based mobile development platform for healthcare providers to engage patients, improve physician productivity, and attract new customers and donors.

ENGAGE PATIENTS & PHYSICIANS VIA MOBILE CHANNELS

- Support patient self-service functions such as appointment requests and bill payments
- Provide physicians with easy access to critical data
- Market your organization's brand through mobile channels to attract new patients and donors
- Inform existing patients of additional services offered by your physicians and facilities

POWERED BY A MODERN, COST-EFFECTIVE MOBILE PLATFORM

AnyPresence provides a software-as-a-service solution that cost-effectively enables your organization to deploy modern mobile apps that leverage existing investments in HIS/EMR, billing, CRM and other systems. This unique solution includes:

- **Mobile-optimized user experience** - leverages the latest HTML5 and native mobile technology to take advantage of touch based interfaces and smart device capabilities
- **Multi-device support** - continuously adapts the content and interface for the expanding variety of mobile device form factors such as screen sizes and interface types
- **Configurable branding** - support corporate guidelines for colors, logos, and other branding elements
- **Extensibility** - supports custom functions via web services, database procedures or code customization
- **Open integration** - standards based web services interfaces for easy integration with existing IT infrastructure
- **Reliable hosting partners** - secure, SAS-70, HIPAA compliant hosting, failover, and automated backups
