WE ARE THE BUSINESS-ONLY FIBER NETWORK.

---

everstream®

FASTER FIBER. BETTER BUSINESS.®

13,000+ miles

With more than 13,000 route miles of fiber, we have field offices with local inside and outside plant, sales and operations teams in cities across our Midwest footprint.

100 Gbps

With speeds up to 100 Gbps, our network is on track to grow to more than 15,000 miles of fiber by the end of 2020.

24/7 365

Our responsive 24/7, U.S.-based Network Operations Centers are staffed by engineers who efficiently answer incoming calls.

WHO WE ARE

At Everstream, we understand that for business, bandwidth is oxygen. When it's there, no one thinks about it. But when it's gone, getting it back becomes your only focus.

That's why we built the Business-Only Fiber Network.

Our locally owned and managed network disrupts the big telecom status quo by only serving business. With more than 13,000 miles of fiber across six states, we deliver high-speed, low-latency connections and symmetric upload and download speeds up to 100 Gigabits per second (Gbps).

But providing a network is only part of it.

We form real relationships with our customers. We listen, engage and dedicate ourselves to helping you succeed today and into the future.

We provide expertise, not excuses.

From our corporate offices in Cleveland, Ohio, to our field offices and operations teams throughout the Midwest, we all follow the motto **"Do what you say you will do."** It's at the center of the culture we've built and it's what drives our team members to put forth the effort, honor their commitments and deliver an unrivaled customer experience.

Whether you have just begun to research network service providers for your business or are looking to improve your existing connection, be sure to think about what you really need from your network provider. If reliability, speed and scale are essential to your business success, Everstream is the right choice for you. And if you think connectivity should include expert service before, during and after the sale from a team with years of technical experience, we invite you to join us.

Discover the Everstream Difference.
Find out why we are the Business-Only Fiber Network.

A STRONG NETWORK IS
THE FOUNDATION FOR GROWTH.

———

Everstream was founded because we believe business deserves better. We've built our network — and company — to support that premise.

Across our rapidly expanding Midwest footprint, our 100% all-fiber network delivers fast and reliable connectivity from the core to the curb. It is the backbone upon which all our solutions are built. With a sole focus on delivering connectivity to enterprises and organizations with complex requirements, it can scale easily to meet your growing bandwidth needs.

Whether you require a private, high-speed fiber connection, network security and redundancy, or real-time data replication, we understand that performance and reliability are essential — **and we make it our job to deliver it.**

WHY WE'RE DIFFERENT

CONNECTIVITY
Our network is capable of accommodating converged internet, voice and data services at speeds up to 100 Gbps.

BURSTING
Our no-charge bandwidth bursting delivers the flexibility of on-demand bandwidth when your needs increase temporarily — keeping your business operating at peak performance.

DIVERSITY
We provide true network diversity through flexible designs — ensuring diverse routes and entry to buildings and from carriers — and redundancy through multiple routes made available during the design process.

DIRECT PEERING
Our network enables direct peering with all major carriers as well as cloud and content providers, including Amazon Web Services, Microsoft Azure, Salesforce and more.

LATENCY
Our average network latency is less than 5 milliseconds, approximately 90% less than other providers.

REPLICATION
We offer basic latency service level agreements for storage replication that align with the industry's EMC standard of less than 4 milliseconds for real-time replication.

SERVICE DELIVERY
Service Delivery Managers act as your primary point of contact until service is up and running smoothly. They serve as your project manager and provide updates at each step of the implementation process.

SUPPORT
Diverse U.S.-based Network Operations Centers in Cleveland and Lansing are staffed by engineers.

WHAT DO YOU WANT TO DO
WITH YOUR NETWORK?

When you partner with Everstream, we start by learning about your business, determining what you want to accomplish and truly understanding what it is you want to do with your network.

Whether you require a private, high-speed fiber connection, network security and redundancy, or real-time data replication, we deliver it with unmatched speed, reliability and scale. Our network is purpose-built to ensure optimal performance from core to curb, no matter the solution.

And if you're not sure exactly what your business needs, we can talk about that, too. **Our experienced team will help you find the solution that's right for your business** so you can get the most from your IT investments.

ETHERNET

Everstream's Point-to-Point (P2P) connection delivers a private, reliable, high-speed Ethernet connection between your business and a second location of your choice while our Point-to-MultiPoint (P2MP) service eliminates the need to manage a VPN connection. Instead, your business can connect three or more geographically dispersed sites, allowing each to communicate with one another as well as a data center or colocation facility of your choice.

DATA CENTER SERVICES

Everstream's Data Center services handle the entire process — evaluating, documenting and matching your business needs to best-in-class facilities. Everstream also supports Infrastructure-as-a-Service (IaaS) and Backup-as-a-Service (BaaS) cloud-based offerings. All have the ability to be managed by the customer for maximum flexibility.

DARK FIBER

Everstream's build-to-suit Dark Fiber connection provides two or more locations with dedicated Dark Fiber — giving you full ownership to design, light, manage and control your network. It also can be used in conjunction with a lit fiber connection.

DEDICATED INTERNET ACCESS

With Everstream's Dedicated Internet Access (DIA), your service is not only fast and reliable, it's also symmetrical, scalable and secure. Our cloud-based Virtual Dedicated Internet Access (V-DIA) means your business has one, shared public IP address that can be used for all locations — eliminating the hassle and inefficiency of administering and managing multiple IP addresses for multiple sites.

WAVELENGTHS

The fully customizable Dedicated Dense Wavelength Division Multiplexing (D-DWDM) connection allows corporations to transfer large volumes of data among multiple locations, offers real-time, site-to-site replication and can automatically manage IT applications — freeing up resources. Everstream's Managed Wave connection is available to businesses, carriers and data centers looking for a cost-effective, high-speed connection of at least 1 Gigabit between two on-net locations.

FASTER FIBER. BETTER BUSINESS.®

WHAT ARE YOUR
BUSINESS GOALS?

Whatever they are, Everstream is
here to help you achieve them with
high-bandwidth, low-latency solutions
designed specifically for you.

e

"Show up. Put forth the effort. Honor your commitments. For us, **it's really that simple.**"

Everstream believes that its successes are rooted in the basic premise that our customers can't be happy if our employees aren't happy. As president and CEO, Brett Lindsey has championed Everstream's **"Do what you say you will do"** culture — a corporate value and company motto that starts at the top.
