

Protection, Privacy and Peace of Mind for Sharing Sensitive Enterprise Information

EXTERNAL FILE SHARING SECURITY & GOVERNANCE PLATFORM

Lock down and govern the exchange of sensitive enterprise information with the outside world by giving users a simple, secure external communication channel. With the Accellion secure file sharing and governance platform, CISOs prevent data leaks, protect against malicious attacks, eliminate shadow IT, and gain visibility to all sensitive content entering and leaving the organization.

See Each File Enter and Leave Your Organization

Protect IP, PII, PHI and other valuable digital assets with full visibility into how every file is shared, including sender, receiver, origin, destination, time of day, file type and other relevant metadata. Analyze suspicious external file transfers with detailed drill-downs and ad-hoc reports, so you can take the appropriate actions.

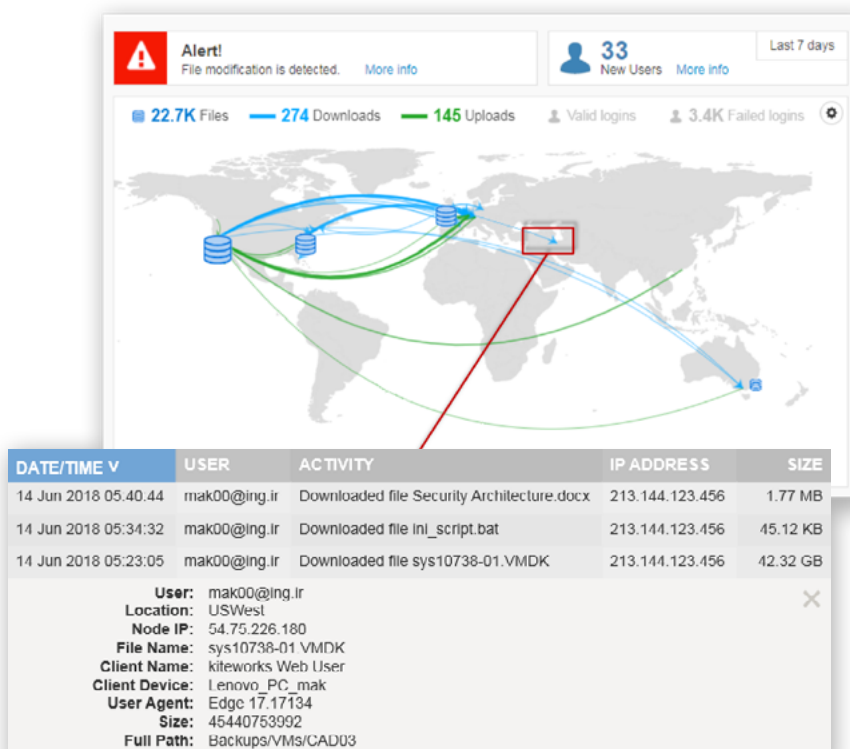

Complete Compliance and Control

Ensure data privacy with granular policy controls and role-based user privileges across all sharing applications, including web, mobile, desktop, SFTP, and APIs to ensure only authorized users access and share sensitive information.

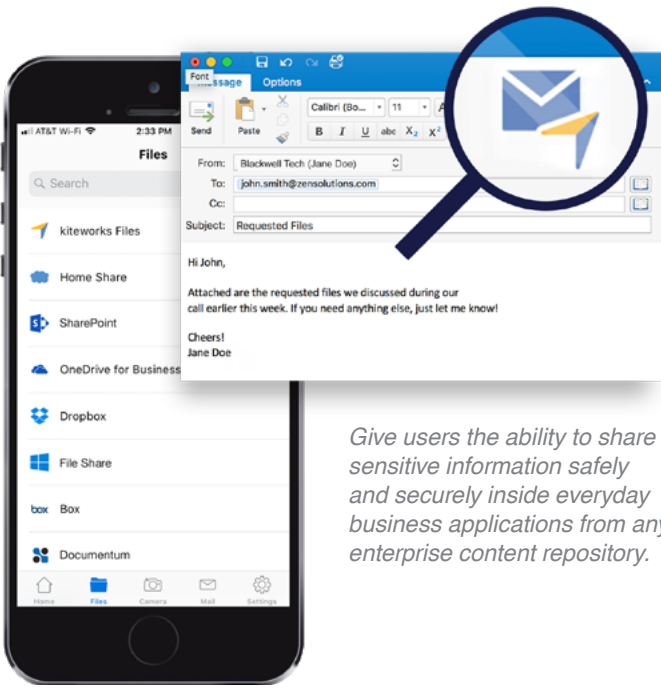

Comply with HIPAA, GDPR, FedRAMP, 23 NYCRR 500, FIPS, SOC 2 and many more. Provide proof of full visibility and control of sensitive information with one-click compliance reports.

Avoid Data Breaches and Repel Cyber Attacks

Safeguard sensitive information at all times with TLS 1.2 in transit, AES-256 encryption at rest, and sole encryption key ownership. Choose between on-premise, private cloud, hybrid, FedRAMP, or fully hosted deployment to fit your unique needs and ensure data stays where it belongs. Reduce risk and maintenance with a hardened virtual appliance that easily integrates with your existing security infrastructure, including SSO, LDAP/AD, SIEM, DLP, ATP and more.

The CISO Dashboard lets you see all files entering and leaving the organization so you can quickly separate normal business activity from suspicious anomalies.

Give users the ability to share sensitive information safely and securely inside everyday business applications from any enterprise content repository.

Prevent Shadow IT and Speed Adoption

Empower employees to share sensitive documents securely from the apps they use all day, every day. When users click the Accellion button inside email, web, mobile, office and enterprise apps they know it's the safe and secure way to share sensitive information with the outside world.

Unify Access to Content Silos Without Migration

Streamline workflows with enterprise content integration and workflow automation. Unified access to applications, content management systems, network file shares, and cloud storage makes finding and sharing sensitive information fast and simple.

GOVERNANCE

- Visibility into all files entering and leaving the organization
- Complete audit trails and system logs
- One-click compliance reports
- Granular policy controls and permissions for data privacy
- Data sovereignty
- Compliant with HIPAA, GDPR, ITAR, FedRAMP, and more

SECURITY

- Data encryption in transit and at rest
- Encryption key ownership
- FIPS 140-2 certified
- Integration with SSO, LDAP/AD, DLP, ATP, SIEM, MDM, and MFA/2FA
- Hardened virtual appliance
- On-premise, private / hybrid cloud, FedRAMP deployment

SIMPLICITY

- Microsoft Outlook plugin
- Secure Web folders
- Dedicated mobile apps for iOS and Android
- Secure Microsoft Office and Office 365 plugins
- Plugins for Salesforce, iManage and SharePoint
- Unlimited file sizes

INTEGRATION

- Unified access to ECMs and file shares without a VPN
- Unified access to cloud solutions like Box & OneDrive
- No content migration
- Consolidated, self-serve SFTP
- Comprehensive REST API
- SMTP integration
