Alfresco Digital Business Platform

Application Developer Framework

Integrations/Extensions

Open APIs & Open Standards

Alfresco Process Services

Alfresco Content Services

**Alfresco Governance Services**

Intelligence & Analytics

On-Premise, Cloud, Hybrid, Managed

The open, modern and secure platform which intelligently activates process and content to accelerate the flow of business.

Overview

The Alfresco Digital Business Platform lets IT quickly develop modern, engaging solutions that accelerate the flow of business. The open, modular platform is easy to build on, integrate and extend for fast time to value and true digital transformation:

• Build Intelligent Business Solutions at Breakthrough Speed

• Deliver Outstanding Experiences for Employees and Customers

• Accelerate the Pace of Innovation across the Enterprise

Business Benefits

Open, Easy to Integrate & Extend — Built on an open source core with support for open standards and open APIs, while the Application Development framework reduces time to value for true business agility.

User Productivity & Collaborate from Anywhere — People can easily access content and processes from within the applications they use every day. Open Web & mobile apps and a wide range of partner integrations complete the picture.

Brings Content & Processes Together Seamlessly—Alfresco allows Content and Process to work together hand in hand to optimize the flow of information through your organization. Smart Folders, powerful rules and actions, and tools that let business users quickly and easily create their own processes are examples of the unique combination of capabilities offered.

Information Governance Simplified— Reduce business risk and strengthen compliance with information governance capabilities that offer an unmatched combination of simplicity and control.

Enterprise-Grade Security & Scale— Whether you need to manage billions of documents or have high throughput, intensive processes, the Alfresco's modular architecture provides the resilience and scalability required.

"Using Alfresco, we can route documents through the company in an easy and more efficient way that we have ever done. Its combination of automated workflow with metadata ensures that the relevant information is always available wherever it's needed."

— Kai Stephan, Senior Manager, Collaboration Solutions, Fraport

Integrations & Extension

The Alfresco Platform integrates seamlessly with leading applications out of the box, so users can access content from within the applications they use to get their job done.

Highlights

Application Development Framework & Modern UX

Using modern UX and UI technologies the Application Development Framework provides a rapid, unified experience for building business solutions that use the Alfresco Platform's tightly integrated process, content and governance services. These modern UX/UI technologies, including Google Material design and pre-built AngularJS components, allow IT to develop applications quickly and iteratively. Users have a consistent, engaging experience across mobile, web and desktop whether they're using an Alfresco module or a custom application.

Open Extensions & Integrations

Integrations with leading applications—including Microsoft Office, Google Drive, Salesforce and SAP—ensure that content is accessible within the context of core business systems and processes. A wide range of extensions and open REST APIs provide the flexibility to add more capabilities for specific business needs.

Process Services

High-performance Business Process Management (BPM) capabilities enable organizations to digitize and streamline a wide range of business processes. Visual process design, decision tables and process analytics make it easy for business users to quickly define and refine processes as operational needs change.

Content Services

Comprehensive Enterprise Content Management (ECM) capabilities allow users to find, view, collaborate on and securely share digital content, both within and outside enterprise boundaries. Business rules, actions and rich metadata "intelligently activate" content so that information flows to the right person at the right time.

Governance Services

Rich information governance capabilities integrate compliance seamlessly into the flow of business. Automated records management and auditable process histories strengthen compliance and reduce corporate risk. The Alfresco Platform is the only open source records management solution that is DoD 5015.02 certified.

Intelligence & Analytics

Intelligence is at the heart of the Alfresco Platform. It starts with smart automation, capture and the ability to add context to information. Alfresco can act on that context though intelligent, adaptable processes, while indexing of all actions taken on content and at every stage of a process provide the foundations for analytics- enabling optimization and increased efficiency.

Flexible Deployment

The Alfresco Digital Business Platform can be deployed on premises, in the cloud or in a hybrid-cloud configuration—whichever best fits your infrastructure, information access, security and budgetary requirements.
