

The SaaS Management Platform (SMP) for Office 365

Optimize your office 365 cloud investment with CoreView

Today's enterprise organizations require sophisticated management to drive admin efficiency and achieve complete oversight of their SaaS environments. CoreView, the full-featured SaaS Management Platform for Office 365 empowers your organization to achieve this plus much more in a **single pane of glass**. As **the representative vendor for Office 365** in Gartner's new SMP Market Guide, CoreView encompasses the full suite of SMP functionality with the added value of four additional functional categories: Administration, Role-Based Access Control, Policy Management, License Management, IT Workflow Automation, Reporting, Security & Compliance, Change Management, Learning, and Taxonomy.

Delegate, Automate, Secure and **Improve** productivity with Office 365. Users can move seamlessly between tasks such as calculating chargebacks and preempting data breaches, to onboarding new employees or tracking long-term product adoption with **CoreSuite**.

CoreSuite combines our three enterprise products: CoreAdmin, CoreSecurity and CoreAdoption.

CoreAdmin

Thousands of employees mean thousands of Microsoft licenses to manage. Keep things simple with a product that lets you segment your tenant, delegate admin rights, simplify chargebacks and automate common provisioning tasks.

CoreSecurity

When enterprise data is compromised, it can take weeks to realize it and even longer to track down the cause. Immediately be alerted to suspicious activity in addition to having long-term storage for your user activity logs.

CoreAdoption

Keeping employees in approved products - let alone making the most of them - is an ongoing challenge. Nurture product compliance by leveraging detailed usage reports to create targeted product adoption campaigns.
