

Corporate overview:

Continuous Controls Monitoring for enterprise security

- See every asset, application, user and data set in real-time
- Uncover gaps in controls coverage
- Spend less time reporting and prioritising risk
- Enhance board decision-making
- Establish regulatory compliance
- Achieve cost efficiency and prove ROI

Panaseer is the first Continuous Controls Monitoring platform for enterprise cybersecurity, helping stakeholders to make informed, risk-based security decisions.

Our platform shows you every asset, application, user and data set across your IT estate in real-time. This identifies gaps in controls coverage, aligns security with framework standards and substantiates regulatory compliance.

Our automated reports significantly reduce reporting time and tailor insights to stakeholders at every level, enhancing decision-making from the boardroom to the analyst. These reports can also be mapped to the organisation's structure, so you can prioritise risk based on impact to the business.

Enterprise security leaders around the world trust our platform to help them make better security decisions.

Why is Continuous Controls Monitoring essential?

Controls can stop working over time for any number of reasons:

- Incomplete or incorrect implementation or configuration
- A user or part of the business fails to install an update or patch
- Problems with the network, licensing or authorisations

Continuous Controls Monitoring can measure your controls coverage against trusted inventories to find and fill these gaps. And effortlessly cross-reference the performance of controls against internal SLAs and multiple security frameworks.

Security leaders want Continuous Controls Monitoring*

- 95% of security decision makers are interested in a solution that provides real-time visibility of assets
- 91% say that CCM would have a significant positive impact on their ability to proactively identify, prioritise, and remediate risk
- 100% expect benefits from proactive and continuous risk identification, prioritisation, and remediation

**Cybersecurity Requires Controls Monitoring To Ensure Complete Asset Protection, a July 2019 commissioned study conducted by Forrester Consulting on behalf of Panaseer.*

“With the help of the Panaseer Platform, we understand the problems better. We effectively address them and provide evidence-based reporting to the board to show progress.”

CISO, GLOBAL FINANCIAL SERVICES COMPANY

“Panaseer has allowed us to gain the insight we need into our security controls to always know whether they're adequately deployed and operating effectively.”

ROB HYDE, CISO

“Many well-known security incidents appear to have a common pattern. They are not the result of some hitherto unknown vulnerability or controls weakness.

Rather, the controls that would have stopped them were thought to be present and operational but were not - just when they were most needed.”

PHIL VENABLES, BOARD DIRECTOR, RISK & SECURITY, GOLDMAN SACHS

See what you're missing

Schedule a 30-minute demo to find out how Panaseer can help you improve your cybersecurity posture and regulatory exposure by:

- Uncovering previously unknown assets and missing controls
- Prioritising vulnerabilities based on business impact
- Reducing the time your team spends on manual reporting
- Aligning metrics to any security framework
- Substantiating regulatory compliance
