## DATASHEET

## SureCloud Platform

Flexible, agile, simple but powerful, our Cloud-based technology is engineered to help you address your ever-changing governance, risk, compliance and cybersecurity challenges.

### The Challenge

A spreadsheet-based approach offers many challenges:

- A high volume of silo processes underpinned by spreadsheets are operationally inefficient and invisible to management.
- Management reporting processes are labor intensive and unproductive, due to the lack of automation of spreadsheets.
- Highly skilled compliance and risk personnel are relegated to spreadsheet administration, rather than reducing the enterprise's exposure to risk.
- A lack of central visibility and ad-hoc management of tasks and project activity makes it difficult to track progress.
- Difficult to assimilate and analyze data to support business decisions.

### The Solution

The SureCloud Platform offers cheaper, quicker, and easier process automation, providing the following benefits:

- A clarified user interface, building on the familiar concept of spreadsheets.
- Work with your existing practices with minimal change.
- Jump start your program with out-of-the-box, best practice process templates.
- User-based pricing, which is conducive to starting small and demonstrating value before a wider rollout.
- A centralized, single version of the truth where management has overall visibility, and all process participants can contribute regardless of their geographic location.

**“We chose SureCloud because of its recognized cybersecurity expertise, technology platform, speed in delivery and budget-friendly pricing.”**

## Key benefits

The SureCloud Platform has many key features, allowing automation of any GRC process. These include:

### Templates

Pre-configured Forms, Workflows, and Dashboards for many GRC processes and standards. They can be used 'out-of-the-box' or quickly adapted to support specific process needs.

### Forms

End-users can easily create simple or sophisticated Forms for questionnaires or to capture process inputs, such as ISO 27002 controls, Risk Assessments or Third-Party Assurance questionnaires.

### Organizational Groups

Hierarchies can be created to model any organization or permission structure and can be used to control access to individual Forms, Form Sections, Form Fields, or Library Documents.

### Tasks, Workflow, and Projects

Create these to support the productivity and process needs of the organization. Tasks can be associated with Forms or Form Sections for the assignment of activities to individuals or teams.

### Evidence Library

Files of any type can be stored in a central information repository, controlled by the user and group permissions. Users can associate Documents with Forms, tag them for use in complex searches, or set up alerts for such things as document expiry. Links to existing document management systems are also supported.

### Dashboards

Users can set up custom dashboards, summarizing the relevant information for their roles and permissions.

### Reporting and Analytics

Standard reports are available in PDF and Excel Format, and custom reports and advanced analytics can be produced with the SureCloud MS Office Add-in.

## Why SureCloud

SureCloud is a provider of cloud-based, integrated Risk Management products and Cybersecurity services, which reinvent the way you manage risk. SureCloud connects the dots with integrated Risk Management solutions enabling you to make better decisions and achieve your desired business outcomes. SureCloud is underpinned by a highly configurable technology platform, which is simple, intuitive and flexible. Unlike other GRC Platform providers, SureCloud is adaptable enough to fit your current business processes without forcing you to make concessions during implementation; meaning you get immediate and sustained value from the outset.
