

Tanium Executive Brief

The proven platform for endpoint visibility and control

Security and systems management starts with visibility and control

Successful IT and security strategy starts with the basics: visibility and control across your entire environment. But getting the basics right is not easy, and you can't rely on old and outmoded ways of managing and securing your systems.

Tanium delivers visibility and control at the speed and scale of today's IT environments. Through a patented architecture, Tanium avoids the expensive and slow techniques of every other system and security management tool. Whether you're handling tens of thousands, hundreds of thousands, or even millions of endpoints, Tanium not only adapts to scale, it thrives on it.

What does Tanium offer?

Tanium enables organizations to simplify and unify endpoint management and security.

IT Operations

- Discover unmanaged IT assets.
- Collect inventory for all hardware and software.
- Patch operating system and application vulnerabilities.
- Manage and distribute software.
- Map application dependencies.

Risk and Compliance

- Asses endpoints for vulnerabilities and configuration issues.
- Meet regulatory requirements for file integrity monitoring.
- Identify sensitive data at rest.

Cybersecurity

- Deploy and manage endpoint protection and security controls.
- Detect, investigate, and respond to threats.
- Remediate incidents at scale.

Core Functions

- Ask questions in plain English and take scripted action at scale.
- Visualize and report on key security and operations metrics.
- Enrich systems such as SIEMs, log analytics tools, help desk ticketing systems, CMDBs, and big data clusters.
