

Tanium is the First Endpoint Communications Platform for Today and Tomorrow

Prevent cyber attacks at their root

- Prevention starts with the best practices of good security hygiene.
- Enable complete and current monitoring of compliance across every endpoint.

Detect, hunt, & respond to threats

- Even with all the security tools you own, the bad actors still find a way in. Be ready when speed and completeness is critical.
- Detect, scope, and fully eliminate threats in a way others can't.

Get control of operations management

- Visibility and control to every system on-premises, in the cloud, or remote employees.
- The only enterprise platform that can scale with today's highly distributed IT environment.

Improve IT asset visibility

- Software audits and poor resource utilization can waste millions of dollars due to inaccurate asset records.
- Don't chance it. Know with confidence what's running on your endpoints today—not what was running last month.

We offer a single endpoint agent and infrastructure to address a number of critical IT use cases

Are you struggling to innovate with technology in order to feed the business hunger for digital transformation while keeping data and devices safe and secure? Are you faced with expensive, ineffective security tools? Are you grappling with excess software licenses and over-allocated assets? These are just some of the challenges we hear every day from the CIOs and other IT leaders with whom we work. These inefficiencies drive your spending, increase your organizational risk, and distract from your real mission—enabling the business to innovate and operate as efficiently as possible.

Tanium helps eliminate IT waste in a number of critical ways:

Reduce endpoint management and security point tools, thus reclaiming valuable compute and headcount resources.

Enable efficient collaboration between IT operations and security teams by delivering a single, always up-to-date source of truth.

Reduce the amount of effort required to prepare and assess your regulatory compliance measures.

Reclaim unused software licenses and leverage current data to respond to software-vendor audits.

Eliminate wasted incident response efforts, which are often caused by slow and incomplete point tools which fail to play nicely together.

Fundamentally different than every other IT tool

Tanium was created to manage the new reality of networks—dynamic, distributed, and rapidly changing. Through a patented architecture, Tanium avoids the expensive and slow techniques of every other system and security management tool. Whether you're handling tens of thousands, hundreds of thousands, or even millions of endpoints, the Tanium communications architecture not only adapts to scale, it thrives with it. The net result? Tanium makes organizations more resilient, adaptable, and secure than ever before.

Tanium gives the world's largest enterprises and government organizations the unique power to secure, control and manage millions of endpoints across the enterprise within seconds. With the unprecedented speed, scale and simplicity of Tanium, security and IT operations teams now have complete and accurate information on the state of endpoints at all times to more effectively protect against modern day threats and realize new levels of cost efficiency in IT operations.
