CIO Healthcare Summit Announces Agenda

Session Details

April 1, 2011 – The CIO Healthcare Summit team announced today details about two CIO Thought Leadership presentations that are taking place at the technology event to be held April 3-6, 2011 in Scottsdale, Arizona.

The CIO Healthcare Summit brings together CIOs, technology analysts and solution providers to network, attend educational sessions and have in-depth discussions in a relaxed, yet focused setting. The event's agenda features panel discussions, analyst Q&A sessions, and CIO Think Tanks as well as formal and informal networking opportunities.

The CIO Thought-leadership session, Wireless Indoor Networks Impact on the Macro Network, held on Monday April 4, will discuss how macro wireless networks interact with indoor wireless networks; how businesses can collaborate with wireless operators; and the technology, architectural changes, and business drivers that will change how indoor networks are deployed. The session will be led by Luc Adriaenssens, SVP of Technology from CommScope, a company that provides a portfolio of end-to-end infrastructure solutions including everything needed to build high-performing wired and wireless networks.

Erkan Akyuz, EVP, Product Strategy and Development, Vital Images, Inc., will lead the CIO Thought Leadership session, Deployment Flexibility for Enterprise Image Distribution. The session will discuss how advanced systems can be turned into virtual machines that can be hosted within IT infrastructures following the trend in other enterprise applications, such as email services and enterprise resource planning. Vital Images connects healthcare providers with powerful 2D, 3D and 4D image creation, analysis, viewing and distribution tools.

“We are so pleased to have CommScope and Vital Images presenting at the event. These innovative companies have a wealth of information to offer our attending delegates and I look forward to their presentations,” said Chris Li, Event Director, CDM Media.
